Objective:

- To provide efficient and creative programming solutions for advanced e-commerce and customer oriented web applications using existing and emerging web technologies such as PHP and Flex. Stated another way, I am a creative person who loves to understand how things work so that I can make them work better; specifically using PHP, Flex, and other web technologies.

Summary Of Skills:

- Programming Languages
 - PHP 4.0 to 6.0 (11 years)
 - Adobe Flex 1.5, 2, 3.01 (2 years)
 - Action Script 2.0, 3.0 (3 years)
 - Javascript / AJAX (3 years)
 - HTML (11 years)
 - CSS (5 years)
 - AMF PHP / WebOrb (1 year)
 - MySQL 4.1, 5.0, 5.1 (5 years)
- Webserver Management
 - Apache 1.3, 2.x
 - MySQL
 - Email List Management
- Computer Repair
 - PC maintenance and repair
- E-Commerce Software
 - Zen-Cart
 - OSCommerce
 - Custom Flex Shopping Carts
 - Google Checkout
 - Paypal Website Payments Pro and Standard
 - Linkpoint
- Software
 - Linux (OpenSUSE, Ubuntu, Fedora)
 - Windows 2000, XP, Vista
 - Mac OS X
 - Microsoft Office
 - Open Office
 - gEdit
 - Adobe Flex Builder
 - Firefox
 - Internet Explorer
 - Opera
 - Google Chrome
 - Notepad++
 - The GIMP
 - Adobe Photoshop
 - Adobe Flash
 - Subversion
- Formal Education
 - Oakridge High School: Muskegon, MI

Recent Work:

- www.stock20.com
 - I have freelanced for a company called Stock20.com for over three and a half years as their only web programmer. During that time I customized a Zen-cart shopping cart for them so customers could easily find and preview music and then purchase and download it in a convenient and secure way. Stock20.com currently uses several custom built Flex applications to facilitate this, all of which interface with the PHP back end of the site via XML.
 - I am also in the process of building a brand new website for Stock20.com that uses the MVC programming model and architecture. It has a fully Flex front end, and uses WebOrb to communicate to the PHP back end which handles all database access and business logic. It is a modular application with each component having the ability to be replaced without affecting any of the other components, and because it's based on a PEAR MDB2 database abstraction layer, it can run on any operating system under any webserver and database server.
- www.redbeardmusic.com
 - RedbeardMusic is also owned by Stock20.com but sells a different style of music. Although this is a Zen-cart based solution as well, it has custom code to handle the specific licensing model for this type of music. It has code in place to automatically notify users of expiring licenses and help them to renew their license.
- www.danielrudd.com/index.php
 - This is a personal website that was built using a PHP back end and has Flash and Javascript components.
- Please see my website (www.anthonypetty.com) for more details and a specific explanation of the technologies in use on each of these sites.

Employment History:

- Stock20.com: Muskegon, MI
 - May 2005 to Present (3.5 years)
 - Web programming, website design, technical support, customer support.
- Orchard View Congregational Church: Muskegon, MI
